

David Sasson

Backend & Platform Engineer

Jerusalem, Israel · +972 52 262 6684 · davids2289@gmail.com · linkedin.com/in/david-sasson-developer

SUMMARY

Software engineer with five years of experience building AI security, cloud security, and third-party risk products. Resolves performance bottlenecks, designs reusable platform architecture, and takes complex systems from design through production.

TECHNICAL SKILLS

Languages & Frameworks: TypeScript, JavaScript, Node.js, NestJS, React

Backend: REST APIs, Microservices, Kafka, RabbitMQ, SDK development

Data: PostgreSQL, MongoDB, Redis, TypeORM, Mongoose, Data modeling

Engineering: System design, Platform engineering, Performance optimization, Testing

EXPERIENCE

Cyera - AI and Data Security

Software Engineer - Tel Aviv, Israel | Jun 2025–Present

- Owned end-to-end delivery of AI Assets from inception, building the AI Assets catalog page, polymorphic asset-details page, and AI Security dashboard page in partnership with a backend team, Product, QA, and Design.
- Designed AI Assets' polymorphic family-and-instance model and extended shared layout infrastructure with dispatcher-driven tabs and cards, cutting new asset additions from days to hours and enabling backend engineers to complete UI integrations independently.
- Cut worst-case query latency for large customers from approximately 5 seconds to 0.5 seconds while improving performance across all tenants by moving heavy aggregation from the server into the database.
- Resolved production OOMs and elevated latency by eliminating Cartesian fan-out in a many-to-many database query, restoring baseline response times and improving performance across tenants.

Panorays - Third-Party Cyber Risk Management

Full-Stack Developer - Tel Aviv, Israel | Oct 2021–May 2025

- Cut a backend data-retrieval job spanning all customers from 11–12 minutes to 1.5 minutes by replacing repeated batched API calls with a single purpose-built endpoint, reducing database load and removing consumer-side aggregation and deduplication.
- Built a configurable risk-policy system used by more than 50% of customers to override default risk calculations, owning its data models, calculation logic, and complex UI end to end.
- Built rules-driven workflow automation that triggered emails and task assignments when customer-defined security conditions were met.

EDUCATION

Freie Universität Berlin

M.A., Near & Middle Eastern Studies; 94/100; full scholarship, *Intellectual Encounters of the Islamicate World* | 2016–2018

Ben-Gurion University

Combined B.A., Psychology & Near and Middle Eastern Studies; 90/100; Departmental Excellence Program | 2013–2016
